TiBTiX® is a partner professional portal where business partners have access to shared documents securely. Digitize customer communication, documents and transactions can avoid email communications due to security issues for such sensitive documents

Each participant has its own personal TiBTiX® lockbox where online access to all sensitive business documents is provided. The documents are stored in a directory structure, where the user can search and easily locate every document, relevant to any business transaction.

Invoices, proposal, offers, monthly statements, contracts or project documentation are encrypted and stored on your own company servers. Such documents never leave this server infrastructure unless the user/partner correctly verified and logged in the proper sequence with access to TiBTiX can open or download the needed documents.

TiBTiX® can easily be integrated into any ERP software solution and into existing business processes

TiBTiX®

A digital lockbox for sensitive documents

Deploy sensitive documents safely into the personal lockbox for each business partner. TiBTiX® is the convenient alternative to sending letters or email attachments. It the safest and most secure service portal, based on Block-Chain technology that can be deployed

Instead of an email attachment, your customers and business partners receive an email with an internet link, where they have to login to access the documents.

Digitally Send Sensitive Documents

TiBTiX® offers your business partners an online access to sensitive documents. A useful alternative to sending unencrypted email attachments.

Any authorized person can log into the system from anywhere to manage the list of documents, which are visible and accessible to the user. Administrators can even replace the actual content of a specific document and inform the business partner of the changes applied.

Use TiBTiX® Blockchain Technology to Digitally Seal Important Documents

Digital archiving of important documents is only a few clicks away. Actual content can be sealed for any document in the TiBTiX ® Blockchain. Any time later the user can prove that no content has been changed modified since it was sealed. A unique number (hash-code SHA-224) is calculated based on the content of the document to be sealed. This number is inserted into the TiBTiX® blockchain and published. This feature allows to easily store the current status to the said document or contracts, offers, letters of intent safely at a third-party company without actually uploading these documents.

How does it work?

TiBTiX® is a web application that can be installed as an extension to any output relevant to a Management System or an ERP System. The output management system automatically creates a new user account for the recipient and sends a temporary password for the first login to occur. After the first login, the user is prompted to enter a personal password. From then, access to all the documents which have been sent to his account is available and unique..

For ease of use we provide a service, where all documents, which are attached to an email are automatically replaced by download links when an email is sent. The documents are uploaded to a save server in Switzerland and the recipient email address is automatically registered as new user if needed.

How much does TiBTIX® cost?

An enormous amount of money can be saved by replacing the process of sending printed paper documents through usual channels which are not secure. TiBTiX® is a very low cost alternative to printing and sending sensitive documents as letters. It is more convenient and cheaper than sending encrypted email attachments. Having online access to all the documents anytime. Minimizes losing documents due to static repository and virtual location. Documents are always available and under control forever.

Pricing is based on the number of documents to be stored in TiBTiX®.

Existing Customers

Our existing customers are international companies like Bayer Schweiz AG, Schroders or Novonordisk who are deploying pay slips and salary certificates to their employees digitally with TiBTiX®. These customers confirmed the cost saving and the high security standard and the simple integration into the existing business processes.
